

News: MixWare: Mixware Presents Magma Digital DJ Switchbox .V2

Posted by [Harmony Central News](#) Jul 12, 2010

The new MAGMA SWITCHBOX .V2 makes it easier than ever to transition between two digital DJ's, without having to unplug the decks and mixer to connect a new soundcard. It provides a hustle-free DJ swap, enabling two DJ audio interfaces to be connected simultaneously to a mixer

- even a two channel battle mixer.

The MAGMA SWITCHBOX .V2 features a three-way selector switch to assign the signal from each deck to either interface to switch between two digital DJ setups, or send it directly to the mixer (THRU).

In addition to switching between two soundcards, the MAGMA SWITCHBOX features connections for two turntables and two CD players. A Mode switch enables either system to be controlled via CD or vinyl.

Forget the days of unplugging one deck at a time when you finish your set, and reaching behind the mixer to fish for your cables. You can now patch into the system without getting in the way of the previous DJ finishing his set. When you are ready to play your first record, just select a deck from the MAGMA SWITCHBOX and you are good to go. When you are done with your set, you can unplug at anytime without interrupting the next DJ.

The MAGMA SWITCHBOX 2.0 is also great for Tag Team DJing and DJ crews. So if there are 2 DJs performing with each of their laptops (DJ A: Traktor Scratch and DJ B: Serato), the turntables (or CD-players) can easily be routed towards the desired audio source.

Features

Works with all DVS systems including Traktor Scratch and Serato Scratch Live

Connect to and switch between two digital DJ-systems/ interfaces with a traditional DJ setup

Switch between two interfaces without RCA re-patching for simple DJ transitions

3-way selector switch assigns the signal from the decks to Interface A, Interface B, or Thru to the mixer

Both digital systems can be controlled with Timecode Vinyl as well as Timecode CDs

Passive : No power supply required

Includes RCA cable-snake
